

## Weighing/dosing

Marvu delivers a wide selection of equipment for weighing applications, from check weighers to custom-designed weighing systems. All equipment is robustly constructed using stainless steel and plastic, making it suitable for hose-down cleaning. Depending on the type of product and the capacity, the products can be fed by belt or screw conveyors.

The desired weight can be selected easily via a touch screen or weighing indicator. A large, clear display can show the current weight both in numbers and by means of coloured LEDs. Data can be printed or transmitted via various protocols (such as RS232 / 422 / 485) for further processing.

Of special interest in our product line are check weighers for capacities of up to 50 measurements per minute (dynamic calibrated weighing).

All weighing applications can be implemented for calibrated weighing.
