

Special machine Bag sealing machine

Suitable for:

"Efficient packaging ensures a smooth transition to the subsequent process"

The Bag sealing machine is a highly efficient packaging machine. This special machine is primarily designed to package dough products - prior to freezing, for example - but is can also be used in other food processing industries. The length of the sealing bar is fixed, but available in custom sizes.

The solution to your logistics requirements when:

- Products require efficient processing once packaged
- Dehydration during the freezing process must be kept to a minimum
- Straight forward handling is desired after freezing

The benefits of the Bag sealing machine:

- Sealing speeds of up to 15 cycles per minute
- Sealing takes place from above, removing the need for division of the conveyor or re-orientation of the product
- Prevents frozen products clumping together
- Protects product quality
- Reduces frost formation in the freezer
